

# Handrails

**Handrails** are available from Handi-Ramp on a stand alone basis or as a component on any of our ramp systems. Handrails are constructed of galvanized steel and are recommended on all rises of 6 inches or more. Design options include:

**Single Bar Construction** - Provides a single bar handrail. This is the most economical handrail option. This type of handrail is typically installed on private homes.

**Double Bar Construction** - which provides an added level of safety by adding a second support bar 16 inches below the handrail bar. This design is typically installed on ramp systems addressing rises of less than 30 inches.

**Vertical Pickets** - provide maximum safety, especially with small children. As recommended by CABO, all handrails addressing rises of 30 inches or more should have vertical pickets attached. These pickets are designed to prevent a small child from falling through the handrails. Pickets are spaced less than 4 inches apart.

#### About Handi-Ramp:

With forty years of experience in designing access solutions, Handi-Ramp knows that each ramp application is unique and may require some customization. Our design team is ready to work with you to meet your specific needs.

WE ALSO HAVE A FULL LINE OF  
PORTABLE ACCESS RAMPS AND  
VAN RAMPS THAT WILL HELP YOU  
GET OVER ALL THOSE  
BARRIERS YOU ENCOUNTER IN  
EVERYDAY LIFE.
